## Typical List of builders work by others

- 1. Provide a watertight lift shaft to the dimensions shown.
- 2. Provide electrical supply adjacent to our control panel in the form of a 415v, TP&N, 50hz supply protected by a 20amp Motor Rated MCB terminated in an isolator capable of being locked in the off position.
- Machine room access ladder.
   Do not build nib walls until the lift has been installed.
- 5. Fire clad up to the lift entrances for a 60 min fire rating. Please note the machine access hatch is not fire rated. Install a RD60 fire hatch above the upper entrance as shown after the lift is installed if fire rating is required.
- 6. Structure shall not carry buildings forces. Structure to be fixed to building fabric in the pit, at each floor level and at the top of the shaft in the corners.
- 8. Temperature in MR room shall be between +5 ° to 40 ° constantly 9. Provide a scaffold tower the full height of the shaft. Size to be determined at contract stage.

  10. Provide storage space on site and assistance to off load.

  11. Form a 100 deep pit if level access is required at the bottom
- 12. Ensure the base/pit can withstand the loads as detailed.13. Provide barriers at each floor to guard against fall hazards14. Provide 110v temp. lighting & power
- 15. Protect building fabric during egress of materials.

level.

- 16. Provide assistance with off loading and distribution of materials.17. Dispose of packaging and off cuts
- 18. Ensure the lighting at the control panel is 200 lux at floor level.19. Ensure the lighting is 50 lux at floor level on each landing.
